Quick Guide to the Audiovisual System

To control the AV system, use the AV Control software on the PC or the touch panel (if available).

- The PC screen and the touch panel will go blank after several minutes without use.
  - If the PC screen is blank, move the mouse to wake the PC.
  - If the touch panel is blank, touch it anywhere.
  - If the system does not display the Main Menu page, press Back to Main Menu.

STEP 1: Select the mode of operation, either Simplified or Manual.

Note: Don’t worry about occasionally pressing the wrong button, as long as you don’t turn off the projector which has a long restart time. You may confuse your audience, but you cannot confuse or damage the AV system.

Helpful Hint: If you are unfamiliar with the AV system, it’s a good idea to orient yourself before class by trying the media you will be using in class.

Use the Control screen to select and display/playback sources.

- Not all sources are available in every room.

STEP 2: Select a source. Its controls will appear in the middle of the screen

When finished, touch Normal Shutdown.
